

RIGID INDUSTRIES
 "The Brightest, Most Efficient LED Light. Period"

SR-SERIES

Once again Rigid Industries raises the standard with their latest offering, the "SR Series" Single Row Lightbars. Measuring only 1.5" tall, the SR is set to change the face of LED light systems. By using thermally managed latest LED technology, and an updated version of its Patented optics, Rigid continues to offer the brightest furthest projecting LED light bars available. Producing over 3200+ lumens in the 10" version, while drawing only 35 watts, the SR continues the trend that Rigid Industries is known for, efficiency and superior illumination.

E-SERIES

First developed in 2004, the E-Series lineup of products by Rigid Industries set the standard in forward projecting LED lights. The original patented "Hybrid" optical system continues to lead the field in efficiency and projection. In 2011 Rigid Industries reinvested and redesigned the original Hybrid system to work with the latest Cree and Osram LED's. This redesign netted an almost 50% increase in center intensity over the first generation optical system. Using the new optical system, current E-Series lights project more than twice the amount of light at the same power. As LED technology evolves, so does the ageless E-Series product line. Coming in 2012, you will see intelligence, dimming, and high/low functionality. Each E-Series product comes with our latest improvements. Those improvements include, a genuine Gore-Tex pressure equalizing system, ultra efficient heatsink, and the unmatched strength and durability Rigid is known for. Add in Rigid Industries limited lifetime warranty and unmatched customer service and the choice is clear.

- Patented Hybrid Optics.
- Highest Lumen output per watt - unmatched efficiency.
- Unparalleled reliability - shockproof design; oversized heatsink to keep LEDs cooler - Equates to 50,000 hour average lifespan.
- Available in lengths from 4" to 50".
- Spot (10 deg.) or Flood (20 deg.) reflectors give both distance and cornering coverage.
- Every E-Series light comes with wiring harness, switch and cast brackets.
- Limited Lifetime Warranty.
- Low power draw (2.9 amps [14v] per 10" section).
- Highest lumen output per watt - Each 10" section produces approx. 3950 lumens - equivalent to 150 watts of halogen light!

Various Clamps & Mounts Available

Covers Available
Solid White & Black Also Available

Diffused Lens

D2 Driving

Dually Spot

Dually Flood

D2 Wide

An original Dually is 4 LED light in a compact package that can be used for anything from a reverse light on a truck, a handlebar light on a motorcycle, to a flood light on a trailer. With 1300 lumens of light, this small light has more light output than a 50W MR16. At a mere 3x3" this light can fit anywhere. Pulling only 15W you won't find a more efficient, compact light source.

The D2 is our latest powerful LED light with the most total lumen output available in a 3" X 3" housing. Versatile mounting options combined with superior patented optics make the D2 the solution to your high-performance lighting needs. Built-in features include: 28 Watt power draw - 2600 lumens - Thermally managed circuitry which prevents overheating, all backed by our limited lifetime warranty. The new D2 is the brightest compact auxiliary light available to date.

Halo

700 Lumens

The Rigid Industries Halo is the best all around flashlight we have ever used. Utilizing a Cree 10W XML LED with a machined aluminium reflector, makes this an extremely versatile flashlight. With a nice wide beam for area illumination, but a focused center that will project 1000' on the highest setting. Comes with a dual AC and car charger. About the same length as a Mini Maglite (Copyright symbol) but almost 10x the light output.

Various Clamps Available
